Meeting Insights

Meeting Insights empowers organizations to **capture**, **organize**, **and secure** every critical detail of their meetings in a **centralized, searchable platform**, ensuring that no valuable insight slips through the cracks. Meeting Insights offers **enterprise-grade security** and extends AudioCodes' legacy of innovative voice solutions, trusted by **Fortune 100 companies** for over 30 years.

Designed for large-scale enterprises, Meeting Insights offers **unmatched flexibility** with secure storage options across **Azure**, **AWS**, or **BYOS (Bring Your Own Storage)**. It seamlessly integrates with leading **UCaaS platforms** like **Microsoft Teams (native application)** and **Zoom**, and advanced **generative AI (GenAI)** systems to unlock new levels of productivity and operational efficiency across your organization.

Meeting Insights is essential for every employee in the digital workplace to work smarter. Leveraging **Conversational AI**, Meeting Insights helps your teams work more effectively, boosting productivity that benefits not just individuals, but the **entire organization and management.**

By centralizing organizational insights from all meeting data across platforms, Meeting Insights enables comprehensive organizational knowledge management and informed decision-making.

Meeting Insights Key Advantages

- **Unlock the Power of GenAI:** Organizations are eager to explore how GenAI can drive efficiency. With Meeting Insights, we help you implement GenAI in a cost-effective way, ensuring that the value is felt across every team - not just by individual users.

- **Executive Decision-Making Made Easier:** Meeting Insights provides executives with a powerful tool for forecasting and business planning, turning meeting data into actionable insights that drive smarter decision-making.

- **Security First:** Meeting Insights is one of the few solutions focused on keeping your sensitive meeting data secure. With the growing risk of personal bots being used without organizational knowledge, Meeting Insights helps you mitigate security risks — including the potential for GDPR fines if PII is compromised.

- **Minimize Risk:** Employees using unauthorized personal bots create a hidden security risk. This leads to potential data leaks and compliance violations that can expose your organization to regulatory penalties. Meeting Insights ensures that sensitive data is protected and stays within your organization's control.

- **Foster Organization-Wide Impact:** Meeting Insights delivers a comprehensive solution that drives not only individual productivity but also organization-wide collaboration, helping your company unlock greater efficiencies and smarter decision-making across all teams.

- **Business Continuity:** Ensures knowledge preservation and sharing across the organization.

- **Business Applications Integrations:** Email, Microsoft Planner, Saleforce, Monday.

- **Language Support:** Transcription and AI analysis in multiple languages: English (US, UK, Australia, Ireland, South Africa), Hebrew, French, German, Italian, Dutch, Spanish, Portuguese and more.
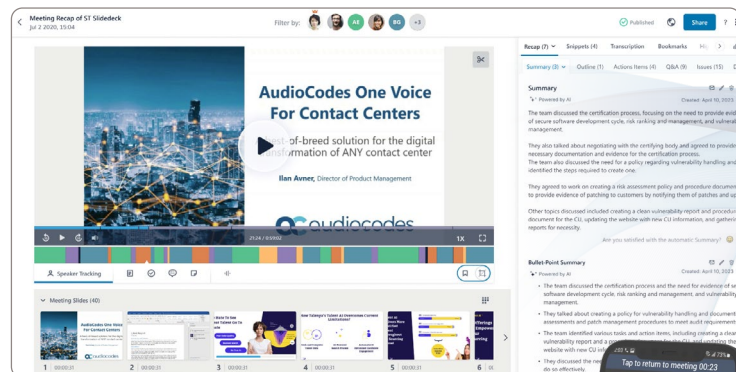

How it works:

1. **Record & Transcribe:** Automatically join and record meetings, providing a transcription and speaker identification.

2. **Capture & Store:** Centralize all meeting details in one hub for easy access and retrieval.

3. **Analyze:** Generative AI quickly analyzes every aspect of the meeting, highlighting key points and sending insights directly to your inbox.

4. **Transform Data:** Convert meeting data into a structured repository with AI-powered summaries that emphasize important details and action items for improved decision-making and collaboration.

5. **Share & Distribute:** Enhance collaboration by automatically sharing meeting summaries and insights, with role-based access control.
